Levo 2.4 SL™ is a new broad spectrum Biological insecticide for use on a wide range of crops against a wide spectrum of Pests. Levo 2.4 SL™ shows excellent efficacy against many species of plant eating spider mites, yet it is able to discriminate and has a low mortality rate against beneficial insects and mites.

Levo 2.4 SL™ is a natural derivative from the plant *Sophora flavescens*, a well-known medicinal plant, widely used in various pharmaceutical formulations and traditional medicinal remedies. Levo 2.4 SL™ does not contain any synthetic ingredient and is therefore non-toxic to human and livestock and is environmental friendly.

Levo 2.4 SL™ has a very low residue index — This important character qualifies Levo 2.4 SL™ to be used in IPM programs as well as in Organic Agriculture and in other cases where low residue products are required.
